SS PIPE FITTING

We are renowned as the leading manufacturer of wide range of stainless steel components that are helpful in joining the pipe and fixing them at a specific location.

The SS pipe fitting is used to join one pipe to other part of some pipe. These fittings are made with high accuracy and precise dimensions. They are famous for their excellent quality, accuracy and durability.

SS BUTT WELDED TEE

The butt welded tee is used to join three pipes or spilt the flow from one pipe to other two pipes. This helps in effectively joining three different pipes together, but the only condition is that the diameter of the pipes needs to be same.

We even offer customization in the shape and size of the SS butt welded tee to suit the application area in which the customer needs to use the tee.

SS ECCENTRIC REDUCER

The reducer is used to reduce the flow of substance through the pipe. The SS eccentric reducer is presented in various dimensions and features to give long durability and corrosion resistance performance.

We prepare them as per the dimension that is requested by the client. They are provided in small as well as bulk quantity orders. These reducer are preferred for their flawless performance and accuracy in dimension.

SS CONCENTRIC REDUCER

The SS concentric reducer helps to connect two pipes of different diameters effectively. These reducers are made with accurate dimension to provide completely leak proof joins.

The reducer is prepared from top grade stainless steel and as per the industry defined rules and specifications. They are checked by our experts to ensure the quality and accuracy in the dimension of the concentric reducer.

SS PIPE HOLDING CLAMP

The clamp are used to hold the pipe to a decided locations. The SS pipe holding clamp is made using the best grade of stainless steel material. They are offered in different shape and size depending on the shape of the pipe and its thickness. We are considered the leading brand name in offering a wide range of SS pipe holding clamps that are durable, strong and corrosion resistant. The clamp we offer provide the best support to the pipe in the complete network of the pipes.
